Easily Measure Brix and Acidity with One Unit -

Sweet and Sour ~Balance is the Key~

Sweetness of fruit is often used for evaluating quality. Unfortunately, sweetness does not always mean that the fruit is tasty. Delicious fruits have the proper proportion of tartness and sweetness. Sugar/Acid ratio indicates the maturation levels of fruits. Sugar/Acid ratio is displayed by pressing a single button (R button). No need for complicated and troublesome calculations.

$$\text{Sugar/Acid ratio} = \frac{\text{Brix \%}}{\text{Acidity \%}}$$

No reagent required

Unlike the traditional titration method, PAL-BX|ACID requires no costly reagent.

Features a backlit screen

PAL-BX|ACID features a backlit screen allowing for easy to read measurements, even in dark locations.
